Subject: FW: draft pilot TES manuscript

Date: Wed, 28 May 2003 16:32:37 -0400

Dear Colleagues:

Believe it or not, the 29th also had conflicts, and I have cancelled our discussion scheduled for the 29th. The next two windows are June 4 and June 5. My original plan was for a rather long conference call (8 a.m. -- noon, EDT), with the goal being to resolve all the issues at once. The scheduling problems we've had have convinced me that finding a 4-hr slot for this group may be an impossible task. I'm therefore asking for 3 hours on June 4. Please let me know your availability by noon EDT on June 2 for a conference call from 8 a.m. -- 11 a.m. EDT. If you are not available on June 4, please indicate to me your availability on June 5 during the same time frame. I'll go with whenever the largest group can participate, and contact those who are not available individually. Thanks for your patience!

Best regards,
Robin

Subject: FW: draft pilot TES manuscript

Dear Colleagues:

There were conflicts with the May 22 date I had proposed for discussion of the attached draft manuscript describing the COHs, nicomStabilities, and biomarkers of potential harm data for the Pilot TES. I have arranged for an audio conference for this discussion on Thursday, May 29 from 8:00 a.m. until noon. My goal is for us to resolve any issues that have arisen about this draft so that we can leave this meeting with necessary revisions clearly defined, make those revisions, and initiate the management and technical reviews of this manuscript. Call-in information is as follows:

Domestic: 1-877-807-4596

International: 405-319-0718

Host Access Code: 171735

Participant Access Code: 227391

Please let me know as soon as possible if you are unable to participate on May 29.

Some of the values in the attached tables may differ slightly from the first tables you received. This is due to slight changes by Covance in some of the tables as they prepared a revised draft of their report for the Pilot Study. It is my understanding that none of the changes had any effect on the statistical comparisons or conclusions in the manuscript.
